

Indian coals - quality evaluation data.

Central Fuel Research Institute - Microwave assisted pyrolysis of Indian and Indonesian coals and product characterization

Description: -

Veterinary public health

Food industry and trade -- Quality control

Food of animal origin -- Contamination

Food of animal origin -- Health aspects

Appanoose County (Iowa) -- History, Local

Names, Geographical -- Iowa -- Appanoose County

Coal -- India -- Analysis. Indian coals - quality evaluation data.

-Indian coals - quality evaluation data.

Notes: Includes indexes.

U.S. Coal Resources and Reserves Assessment

The PRB is the single most important coal basin in the U.

Predictions of Gross Calorific Value of Indian Coals from their Moisture and Ash Content

In energy assessments, it is important to estimate not only the total coal resources, but to inventory the recoverable coal resources and coal reserves as well. Professional Paper 1809 provides an overview of the geology and reports the original resources for the entire PRB, as well as the available coal resources and reserves.

Mercury in Indian Thermal Coals

. In India, coal utilization in power generation, constitutes as the single largest source of mercury emissions. Because of its areal extent, the Greater Green River Basin has been divided into three separate assessments — Little Snake River coal field and Red Desert area WY , Yampa coal field CO , and Rock Springs Uplift coal field WY.

U.S. Coal Resources and Reserves Assessment

Assessment priorities are being adjusted in response to changes in coal utilization patterns and markets. Geological Survey is studying regional-scale assessments of resources and reserves of primary coal beds in the major coal bed basins in the United States to help formulate policy for Federal, State, and local energy and land use. Geological Survey conducted an assessment of coal resources and reserves in the Little Snake River coal field and Red Desert area of the Greater Green River Basin in Southwest Wyoming.

Coal Industry Solution

This differentiates the current coal assessment project from previous generations of coal assessment projects, in which typically only total coal resources were calculated. The Greater Green River Basin was prioritized for assessment because it contains vast land areas controlled by the

Federal government, large portions of the basin have not been formally assessed for coal resources, and previously proprietary drill hole data have become available for use in geologic modeling and economic evaluations. .
