Role of Family in Adolescent Development Essay

For example, if a child's parent gets laid off from work, that may have negative affects on the child if her parents are unable to pay rent or to buy groceries; however, if her parent receives a promotion and a raise at work, this may have a positive affect on the child because her parents will be better able to give her her physical needs.

Preliminary data clearly indicate a negative impact on school performance and

Self-awareness: The ability to accurately recognize one's emotions and thoughts and their influence on behavior. This includes accurately assessing one's strengths and limitations and possessing a well-grounded sense of confidence and optimism.

Self-management: The ability to regulate one's emotions, thoughts, and behaviors effectively in different situations. This includes managing stress, controlling impulses, setting and working toward a achieving personal and academic goals.

Social awareness: The ability to take the perspective of and empathize with others from diverse backgrounds and cultures, to understand and appreciate their feelings and perspectives, and to recognize family, school, and community resources and supports.

Relationship skills: The ability to establish and maintain healthy and rewarding relationships. This includes communicating clearly, listening actively, cooperating, resolving conflict constructively, and seeking and offering help when needed.

Responsible decision-making: The ability to make constructive and responsible decisions about personal behavior and social interactions based on consideration of ethical standards, safety concerns, social norms, the realistic evaluation of consequences of various actions, and the well-being of self and others.

learning, as well as decrements in mood and self-regulatory abilities.

Relationship Development

The overall purpose would be to work out pragmatic and feasibility issues in detail in at least one or two universities on how to effectively integrate basic and clinical training for clinically oriented investigators. She proposed the creation of a research agenda on clinical interventions for youth to accomplish four tasks: 1 synthesize through reviews of the evidence base the status of science on promising interventions, 2 assess quality indicators of outcomes to improve standards of clinical practice, 3 evaluate outcome measures, and 4 develop a new research phase model for connecting research to practice. Research Gaps It is significant to note that the evidence base on the effectiveness of preventive programs and treatments for specifiable disorders and services is growing but uneven.

Adolescence (15

Clinical child and adolescent psychology employs a wide range of procedures and skills addressing the population of infants, toddlers, children, and adolescents. The toll that preventable, untreated, or poorly treated mental illness takes on children, adolescents, and their families is profound and unacceptable.

Urie Bronfenbrenner and Child Development

An extensive body of behavioral science research has identified the specificity and variability of basic behavioral processes in normal populations and has developed a range of methodologies and technologies for such research.
