Reproductive Health

Enhancing efficiency for producers and consumers The dissemination of current strategies for enhancing reproductive efficiency to producers and consumers is facilitated by the system of extension animal science specialists in the Texas AgriLife Extension program. Sperm quality, measured as percentage motility and curvilinear velocity VCL , was variable both among individuals within '6 x 6' colonies and across colonies, with percentage motility being the most variable parameter mean CVs of 82% inter-individual within colonies and 49% inter-colony. While the model may presently lag behind those based on other species of fish, the unique biochemical and physiological adaptations which allow F.

Environmental Impact on Reproductive Health

The ultimate goal is to provide students with the intellectual and critical thinking skills to become the next generation of leaders who will tackle research problems and fuel discoveries. Much of the research on the pheromonal elicitation of male calling has focused on female urine, since female urine also stimulates reflexive LH and testosterone release in males Maruniak and Bronson, 1976 , male copulatory behavior Dixon and Mackintosh, 1971 , while also reducing inter-male aggression Mugford and Nowell, 1971. Both egg output and viability in '6 x 6' colonies were highly variable among colonies with co-efficients of variation CVs of 30 and 11%, respectively and over the 20-day study duration considering egg output and viability of all the colonies combined, the CVs were 20 and 12%, respectively.

Physiology of Reproduction

Lectures will be interactive and will consist of didactic fundamentals, deep dives into the historical literature, and examination of current and emerging topics in the field. One research study found that. NIEHS intramural scientists have defined descriptive terms of particular relevance to their own research, and have ranked those terms accordingly.

NU LABS

In addition to the extension specialists, numerous other faculty members contribute in the effort to communicate the latest information to producers and consumers.
