Using a system of simplex descriptors and the method of tree type classification a QSAR model has been constructed which is suitable for prediction of the diuretic activity of novel quinolinecarboxylic acid N-R-amides.

Article Metrics ABSTRACT: Certain N-1 substituted fluoroquinolonic derivatives were synthesized and evaluated for antimicrobial and antioxidant activities. It can be noted that the best descriptors in the final obtained models can be used to design and screen new drugs.

Biochar impacts on sorption-desorption of oxytetracycline and florfenicol in an alkaline farmland soil as affected by field ageing. Unfortunately, bacteria could develop a rapid resistance to this agent 7, 11. The FDA put out another label change in July 2017, strengthening the warnings about potentially disabling adverse effects and limiting use of these drugs to second-line treatments for acute sinusitis, acute bronchitis, and uncomplicated UTIs.
