### Neurotransmitters

Synaptic transmission is primarily affected by enhancing or inhibiting neurotransmitter release, destruction, reabsorption, as well as by blocking neurotransmitter binding to receptors. Saunders, in , 2013 Abstract Neurotransmitters are chemical messengers by which neurons communicate with each other.

### Brain Neurons & Synapses

The mouse was genetically modified with a gene that creates a green fluorescent protein that causes the neurons to glow green.

### Research identifies 'volume control' in the brain that supports learning and memory

Neuromuscular junctions are large enough to be viewed by light microscopy, and can be a jumping-off point for brain study, highlighting areas of inquiry and potential techniques. An adult human brain roughly has 1,000 to 5,000 trillion synapses. Epigenetic modification of the FMR1 gene in fragile X syndrome is associated with differential response to the mGluR5 antagonist AFQ056.

### Nervous System: Facts, Function & Diseases

Learning to swing a bat requires a great deal of focus when you first try to hit a ball.

### Nerve Impulses: the Key to Understanding the Brain

All of these neurotransmitters are found in both vertebrates and invertebrates. The glial cells provide support and nutrition to the neuronal cells. The study found that women consistently struggle with more stress than men.

### Research Identifies 'Volume Control' in the Brain that Supports Learning, Memory

Stress takes a variety of forms.
