For each sensitivity the corresponding parameter is slightly perturbed and the forward problem is re-solved. This two-level procedure can then be used to recursively define a more general N-level multi-grid procedure.

## Resistivity Methods

Occasionally, ambient electrical noise and other disturbing factors at a site may make resistivity surveying infeasible.

For the model investigated, when the depth of the basement is 50 km, the RRMSD is 11.

Because of the complex, changeable, and unpredictable flow patterns usually observed during in-situ chemical oxidant injection, it is difficult to monitor the distribution of the oxidant using pre-set monitoring wells.
