Outcome Quality Standards in Pancreatic Oncologic Surgery

Impact of hospital volume on outcomes for pancreaticoduodenectomy: a single UK HPB centre experience.

Standards in Pancreatic Surgery

Positive mobilization margins alone do not influence survival following pancreatico-duodenectomy for pancreatic ductal adenocarcinoma. In reviewing retrospective studies, overall morbidity was 27% and mortality was 5%, which is lower than that in most surgical series.

Surgery for Pancreatic Cancer

Long term follow up after 204 cases. Moderate Weak When there is radiological or clinical suspicion of infected necrosis in patients with acute necrotic collections ANCs or walled-off pancreatic necrosis WOPN , image-guided FNA with culture should be performed to distinguish infected from sterile necrosis. Tempero MA, Behrman S, Ben-Josef E, et al.

Surgery for Pancreatic Cancer

Finally, the third PICO question addressing open versus minimally invasive intervention has small numbers but with the most uniform outcomes. Seicean A, Badea R, Mocan T, et al. However, severe imprecision was noted since the studies were small and the confidence intervals were large.
