Forest landscape restoration for livelihoods and well

Although stakeholder involvement is now widely recognized as essential for effective conservation management Hockings et al. Over this time period, results indicated that dryland forests have exhibited progressive fragmentation and degradation in most, but not all, of the study areas examined.

A guide to the Restoration Opportunities Assessment Methodology (ROAM)

A key decision facing FLR programs is how to identify which sites within a given landscape should be targeted for restoration actions. The main aim of FLR is not to re-establish pristine forest, even if this were possible, rather the objective is to strengthen the resilience of landscapes and thereby keep future management options open.

The forest landscape restoration handbook (Chinese version)

The political practice of mountain forest restoration — comparing restoration concepts in four European countries. A further key unknown is the extent to which restoration of forest structure and composition will be associated with restoration of ecosystem function Chazdon et al.

Training manual on landscape restoration

This enabled current forest uses to be identified, and attitudes to restoration to be explored. This highlights the fact that criteria and indicators for prioritizing restoration efforts can successfully be identified using methods such as the Delphi technique, but that the number of relevant variables is large. Ecological Restoration 26 1 :10-13.

Forest landscape restoration for livelihoods and well

However, modeling also revealed that spatial forest dynamics are highly sensitive to variation in the dispersal ability of different tree species, a process that has been relatively little studied Chazdon et al. Using research backed by respected institutions such as ITTO and the World Conservation Union IUCN , it explains how to increase the resilience of landscapes and the communities they support through FLR. UNEP Finance Initiative, UNEP, Geneva, Switzerland.
