## Home

Unless the request method was HEAD, the entity of the response SHOULD contain a short hypertext note with a hyperlink to the new URI s.

## Status Code Definitions

This response is primarily intended to allow input for actions to take place via user input, followed by a clearing of the form in which the input is given so that the user can easily initiate another input action.

## Home

The temporary URI SHOULD be given by the Location field in the response.

## IPCS

If the 307 status code is received in response to a request other than GET or HEAD, the user agent MUST NOT automatically redirect the request unless it can be confirmed by the user, since this might change the conditions under which the request was issued. The 204 response MUST NOT include a message-body, and thus is always terminated by the first empty line after the header fields. Unless it was a HEAD request, the response SHOULD include an entity containing a list of resource characteristics and location s from which the user or user agent can choose the one most appropriate.

## On 'Conflict', 'Peace' and 'Genocide': Time for New Language on Palestine and Israel

If no Retry-After is given, the client SHOULD handle the response as it would for a 500 response. When interoperability with such clients is a concern, the 302 status code may be used instead, since most user agents react to a 302 response as described here for 303. He is the author of five books.
