## The President and the National Security State during the Cold War

Although coal ash is much less radioactive than spent nuclear fuel on a weight per weight basis, coal ash is produced in much higher quantities per unit of energy generated, and this is released directly into the environment as , whereas nuclear plants use shielding to protect the environment from radioactive materials, for example, in vessels. After another announcement reveals that the reported attack is only harmless satellites, everyone rejoices. In 2010, more than 60 years after the first attempts, commercial power production was still believed to be unlikely before 2050.
