Children and War

He has written for the Moscow Times, The Times, the Spectator and the Independent. These stories let children know that people related to them have done worthwhile and interesting things and have survived hard times.

Growing Up Amid War Affects Children's Moral Development

But you also see that in some parts of the world, youth mortality is still very common. But huge disparities between countries still exist. Others, however, were babies and toddlers still too young to leave their mother's side.

Children and War

The same study also showed that the proportion of child deaths from pneumonia that can be attributed to HIV varies widely between countries: in 2010 only 1% of all child deaths from pneumonia in India could be directly attributed to HIV, compared to 64% in Eswatini and 62% in Lesotho. Insufficient diet, especially if in an already impoverished population, leads to malnutrition and weakens the immune system.

Child and Infant Mortality

The sex differences in the causes of infant deaths were already documented almost a century ago: in an impressive paper published in 1929, Bawkin explores the mortality sex ratio of specific diseases from countries across the world.

Growing Up Amid War Affects Children's Moral Development

From comparison of mortality rates in infant boys and girls, it becomes clear that boys are at higher risk of complications in the first few days of life: preterm births, asphyxia, birth defects and heart anomalies. Could they all mislead us to believe that mortality rates were higher than they actually

were? Moreover, thousands of children are currently bearing arms in at least 20 ongoing conflicts.
