### Wetlands of High Conservation Value Map Viewer

Because wetland biomes remain humid and moist for the most part of the year, it is a perfect place for many species including a wide life and birds such as geese, kingfishers, ducks, ibises, and sandpipers. Only Phase I has been conducted.

### Wetland

Many wetlands are not wet year-round because water levels change with the seasons.

### What Are The Major Threats To Wetland Ecosystems Around The World?

The value of a wetland lies in the benefits that it provides to the environment or to people, something that is not easily measured. The Tennessee Department of Environment and Conservation TDEC is charged with protecting the wetlands of the state of Tennessee.

### Wetland mapping

In order to develop public support and to encourage enlightened policy decisions and regulations, it is critical to create and maintain a data base of wetland characteristics in which the data are reliable, comparable, and repeatable at periodic intervals in order to monitor long-term trends.

### Wetlands (2019)

Surprisingly, wetlands can remove up to 60% of metals contained in the water, trap, and hold up to 90% of sediment from runoff and get rid of up to 90% of nitrogen.

### What is a wetland?

It can be fresh or salty water or even somewhere in between. Wetlands are hence crucial for food security, carbon storage, water filtration, and.
