Series was designed to cover groups of books generally understood as such see.

Stuck in administrator

This book is the first and only book devoted to the issues of system administration for X and X-based networks, written not just for UNIX system administrators but for anyone faced with the job of administering X including those running X on stand-alone workstations. X's security features are not strong, but an understanding of what features are available can be very important, since X makes it possible for users to intrude on each other in new and sometimes unexpected ways. Technical decisions are not made by the board of directors; in this sense, it is strongly modelled on the technically non-interventionist.
