## Surgical Pathology Laboratories

The Ophthalmic Pathology Service provides diagnostic services to the Yale Department of Ophthalmology and Visual Sciences as well as community ophthalmologists and other hospitals in the area. The faculty are board-certified in this specialty, with expertise in both anatomic and clinical pathology aspects of hematopathology.

## Pathology & Laboratory Medicine

Anatomic Pathology services at the UC San Diego encompass surgical pathology, cytopathology, and autopsy pathology. We also offer Fellowships in , , , and .

## Surgical Pathology: Specimen Collection

Limbs should be securely wrapped, correctly labeled and delivered to the Frozen Section Suite SESP Room 3P508 during working hours, 8:00 a.

## Surgical pathology

In addition, the goal is to search for diseases with implications for surviving family members, support research, educate pathology residents and medical students, scrutinize the clinical history and anatomic findings for implications about how the care of patients could be improved, and to bring these implications to the appropriate forums to maintain and improve patient care. The surgical pathologist supports surgeons by determining if the entirety of a diseased area has been removed during surgery and provides information that guides for postoperative treatment. Advance arrangements with the neuropathologist or the Pathology resident on call should be made if special studies such as high-resolution light microscopy, electron microscopy or immunostaining are required.

## General Surgical Pathology

The pediatric pathology service specializes in the evaluation of tissue specimen from patients of pediatric age 0-18 years and from perinatal specimens including evaluation of fetal malformations and placentas. Material in these subspecialties is signed out by diagnostic pathologists who have particular subspecialty interest and training in that organ system. Tissue not requiring special handling should be placed in 10-percent buffered

formalin.
