A nominal definition of this sort is sufficient to structure an inquiry into whether an eclipse exists prior to knowing its indemonstrable, scientific definition.

Existence and Being by Martin Heidegger (1949)

Therefore, there must be something about really existing things that accounts for this very existing, and it is not their essence; it is their existence. What if the absence of this involvement and the oblivion of this absence determined the entire modern age? From Aristotle Ricoeur borrows the notion of character, ethos, in order to bring out the import in selfhood of being in representation or engaging in the world with others.

Aristotle and Existence

For if A were nothing, it could not be said not to be ; 'A is not' implies that there is a term A whose being is denied, and hence that A is. The existence expressed by 'there is' is not contained in the word 'exist' but in the form of the particular judgement. But what still appears as ground from this point of view is presumably something else, once it is experienced in its own terms - something as yet unsaid, according to which the essence of metaphysics, too, is something else and not metaphysics.

Or does even this reflection fail to bring us close to that enigma which has occurred with the Being of beings? It always leaves its ground-leaves it by means of metaphysics. The thinking which is posited by beings as such, and therefore representational and illuminating in that way, must be supplanted by a different kind of thinking which is brought to pass by Being itself and, therefore, responsive to Being. Aristotle and Existence

This tradition would treat as futile and illusory any investigation or discussion concerning the essences of things. Religion is an agent of modernity, and Heidegger hated modernity. In principle the answer is clear.
