Data and maps on the US EPA Superfund National Priorities List NPL website can also be viewed and downloaded separately through the web GIS application designed for that purpose US EPA, 2017c. Furthermore, the chlor-alkali industry is a major component of the world chemical economy. In the very broadest or general sense, inorganic chemicals and compounds are defined by what they are not: i) they are not organic in nature and ii) anything beyond biological, hydrocarbon, and other similar carbon-based chemicals may be considered to be inorganic.

Moreover, some current theories propose that life originated on Earth in submarine hydrothermal systems, and abiotic synthesis may have provided the prebiotic organic compounds essential for this to occur Reysenbach and Shock, 2002; Russell and Hall, 1997; Shock, 1992, 1994; Shock and Schulte, 1998.

A larger community of research scientists then entered the field, many of them students of those just mentioned. As can be imagined, the realm of inorganic chemistry is extremely broad, providing essentially limitless areas for investigation.
