## 2 Vols, BIRDS OF THE NORTHERN FOREST & EASTERN FOREST JOHN A LIVINGSTON, ILLUST

The northern flicker is one of 13 extant woodpeckers now placed in the that was introduced by the Irish zoologist in 1825 with the northern flicker Colaptes auratus as the.

### North American Forest Birds

Using good binoculars or a spotting scope, it is also possible to see thousands of sea ducks , , and floating in large groups on the ocean. Today, there are many chapters of the NAS all over the continent and all individual groups have a common goal, to educate the public.

Juvenile birds may have a brownish tinge to their plumage during their first winter. In winter, these birds may spread to the southern part of the state as well, though they are rare to see. In winter, these ducks may be seen throughout the rest of the state in areas where deeper lakes are not frozen over.
