## Nutrition and Chronic Wounds

Clinical Relevance This review provides the clinician with knowledge of basic nutrition, the epidemiology of malnutrition in the chronic wound patient, and how to screen these patients for malnutrition. Forty-three nonmalnourished subjects with stage III or IV pressure ulcers were included in a multicountry, randomized, controlled, double-blind, parallel group trial by van Anholt et al.

## Nutrition and Chronic Wounds

All macro- and micronutrients need to be provided in quantities appropriate to support the functioning of catabolic and anabolic cycles necessary to support life. However, any loss of LBM associated with PCM may negatively affect wound healing.

## Protein calorie malnutrition, nutritional intervention and personalized cancer care

Patients with protein- calorie malnutrition remain in the hospital on average 5. It is not uncommon to see large pressure ulcers or large leg wounds that represent 5—10% body surface area.

## Protein calorie malnutrition, nutritional intervention and personalized cancer care

It is found in the 2021 version of the ICD-10 Clinical Modification CM and can be used in all HIPAA-covered transactions from Oct 01, 2020 - Sep 30, 2021.
