Language acquisition.

Space and time in language.ontogenetic development of literal and metaphorical space in language

Scheme 1. Elements of Forti's analogy	
1. (A) LANGUAGE	LIVING BEINGS
(1) "In both cases a process of structural evolution is at work and the general principles of the 'derivation' and 'kinship' of language and species have much in common" (p.69).	
2. (A) Individuals can create by a species which by a species gives structure (language), which thereby evolves the species.	organisms communicate genetically, thus contributing to the evolution of the species
(3) An already existing structure is used by the individual in a concrete acts of communication, by which the structure itself evolves.	(3) perspectives of structure vs. evolution and synchrony vs. (historical) diachrony enter into the analysis.
3. (A) language/parole	genotype/phenotype
4. (A) new words	new mutations
(5) Evolution takes place by random changes, where the dynamic of change cannot be traced back to the systemic character of the structure.	
5. (A) "Selection must be considered as acting through the pressure of the environment, but the environment is not immediately acting. In the long run, it has to mediate through the selection of the individuals which are better suited to the environment. The process of evolution to such an extent that the whole ecosystem (in biology) and the cultural environment (in linguistics) are involved in the evolution and take over its transcendent character (in the sense of the term 'ecology')."	
6. (A) "Structures" or expression	DNA-triplet or gene
(4) Phenom and DNA-Fright are instances of expression.	
(4) "Human experience"	organic function
(5) Experience and bifunction are instances of synthesis.	
(5) The relationship between expression and content (composition and concept) in litagogies and between the genetic (DNA) expression and organic function is a relationship of sign arbitrariness between signifiant and signified.	
7. (A) grammatical and other (international) redundance	genetic redundance (in the code, polyploid etc.)

## Miscellaneous

In general C will be in some ways stronger, in other ways weaker, than U itself. Metaphorical mappings in american sign language.

## Figurative Language and Thought

Pairing eventually fell to secondary or even incidental place as a principle of the theory of figure. Despite these complications, modern metaphor theory tends to treat the freestanding declarative metaphorical sentence as the fundamental unit of metaphorical action.

## School Age Speech and Language Development

Some historians have Jefferson doubting himself at this moment. The path of my fixed purpose is laid with iron rails, whereon my soul is grooved to run.

## Miscellaneous

Figurative language is the more colorful partner of literal language. In this sense, the primary subject is spoken of and thought about in terms of the secondary subject. In context the vernacular meaning has to yield to another one related to it in some familiar way, maybe by a loose kind of implication.

## The development of metaphorical language comprehension in typical development and in Williams syndrome

So whether they are to be taken literally or figuratively, unqualified simple comparisons have highly context-sensitive truth conditions.

## Development of Metaphorical Thought before Language: the Pragmatic Construction of Metaphors in Action

The blend is in these ways two-sided. This structure of roles conflicts with the quicksand input, where there may be several equal travelers. Metaphor results from a kind of tension between the literal meanings accruing to the focus and the literal meanings accruing to the frame, a tension which disappears when we alter the meanings accruing to the focus just enough to make it disappear.

### **The development of metaphorical language comprehension in typical development and in Williams syndrome**

This text then presents some of the methodological problems inherent in the investigation of language acquisition. Stage 1 is initial reading or decoding stage while stage 2 is the confirmation, fluency, and ungluing from print stage. Milton recruits new structure to the inputs.

### **School Age Speech and Language Development**

Something happens to the terms on which we access our own thoughts about days and how they run: evening is set before our eyes in the suggestive and instructive guise of an elderly human being. New York: Cambridge University Press. They are also able to identify character traits as they relate to the story.
