JabRef references

However, native silica aerogels are fragile at relatively low stresses.

FAMILI: ESTERFIP, A TRANSESTERIFICATION PROCESS TO PRODUCE BIO

The alkylated metaplast may have a lower viscosity and undergo more extensive collapse.

Hydrothermal Handbook

Functional Fillers for Plastics 2002, Intertech Corp. Following deposition of a conductive film, the lower profile and roughened topography in the abraded regions prevents mechanical exfoliation of the conductive film using adhesive tape, and thus the conductive film remains only where the substrate is scratched. The chapter then culminates in the development and characterization of an Ambiently Dried Aerogel Insulation ADAI that eliminates the need for expensive supercritical drying.

Full text of

Aerogel beads in loose-fill situation and aerogel blankets with composite fiber structure have been tested for absorption properties. .
