Scientists call for more diversity in genomic research

If a man abuses his wife and kids, is it because he was born with violent tendencies or is it something he learned by observing his own parent's behavior? Does human DNA control the technosphere we've created and live in and around? I still cannot conceal from you my feeling of exultation as I first watched these exquisite creatures emerging before my eyes.

Nature vs. Nurture: How Much Do Genetics Really Affect Your Health?

But in focusing on these biological reductions, readers are missing out on some of the most fascinating, surprising and illuminating facts about human behaviour. The Hare and the Tortoise: Culture, Biology, and Human Nature. Looking at life his way is a very different experience: highly analytical, usually very Darwinian, and ever-purposeful.

Nature vs. Nurture: The Biology of Sexuality

Parents pass on genes to their children, and these genes influence how children develop, and beyond. We especially hope to explore the implications of new findings in the neurosciences for our understanding of culture, human development, and behaviour.

Nature vs. Nurture: Genes or Environment?

These range from cultural or religious issues and historical precedents, through interplay with existing conditions, to the secondary or tertiary effects in a cascade of interactions that we are not aware of. If that were the case, the world would be filled with brilliant, witty people by now, as the dopes and the dullards would be unable to pass on their woefully inadequate genes.
