## ExOne to 3D Print Lightweight Ceramic

Researchers from the international BASE collaboration at CERN, Switzerland, which is led by the RIKEN Fundamental Symmetries Laboratory, have discovered a new avenue to search for axions--a hypothetical particle that is one of the candidates of dark matter particles. ExOne Technology Drives ORNL Innovation Binder jetting is a groundbreaking 3D printing process that uses a digital file to quickly inkjet a binder into a bed of powder particles — metal, sand or ceramic — creating a solid part one layer at a time.

## Instrument Calibration, Calibration Lab

The intellectual property covered in the license agreement includes pending U.

## Physics

All ads in Quality Digest apply directly to products and services that most of our readers need. Given the established target reliability level for a laboratory and the MTBF for the pipette population, the graph in Figure C can be used to determine the required calibration frequency.

## Instrument Calibration, Calibration Lab

Anderson, Manager of Instrument Systems Engineering for the Second Target Station Project, developed a process to 3D print objects in B 4C, a neutron-absorbing material, and then infiltrate the objects with aluminum. For Example, pressure is defined as force per unit area, and then if there is some error in force and area, there are chances that there will be an error in pressure too.
