There are also specialty tools, such as multiple line tools designed to cut a row of uniform parallel lines, and stippling tools designed to a stipple effect. The metal part of the tool is shaped and hardened, often with a curve bent into the tool to prevent bruising during the engraving process. Once printed, the blocks should be wiped clean, using a solvent like Kerosene, Mineral Spirits, or Naptha.

### Custom wood engraving

V-Gouges Similarly to the U-Gouges, V-Gouges have a V-shaped knife and are ideal for more detail work than the U-Gouge. The drawing to be traced should be reversed rather than right reading.
