ESSENTIALS OF CANINE AND FELINE ELECTROCARDIOGRAPHY INTERPRETATION AND TREATMENT

The leads of the electrocardiograph are color coded, red, green, black and white. Cardiac dysrhythmias due to high vagal tone such as sinoatrial heart block and second-degree atrioventricular heart block were occasionally recorded in 1 and 3 donkeys, respectively.

ECGs in the ER (Proceedings)

On ECG, P waves appear to wander in and out of the QRS complexes. The final technique is to examine leads I and AVF.

Long

Animals in pain or with pyrexia may also show a persistent sinus tachycardia.
