After the prescription was picked up from the pharmacy, the patient needed to take the medication around the clock to alleviate the symptoms. Carditis and resultant chronic RHD are the most serious manifestations of ARF, accounting for essentially all associated morbidity and mortality.

## Chronic Rheumatic Heart Diseases

Several putative cross-reactive epitopes are expressed on group A streptococci including, among others, M-protein and N-acetyl glucosamine. However, some scientists suspect that an exaggerated in people may play a role in the development of the condition.
