**Browse subject: Zoology**

If any person would watch these birds of a fine morning in May, as they are sailing round at a great height from the ground, he would see, every now and then, one drop on the back of another, and both of them sink down together for many fathoms with a loud piercing shriek. The gentleman above-mentioned has just fixed a barometer in his parlour at Newton Valence. However, an intelligent friend of mme near Chichester is determined to try the experiment ; and has, this autumn, at the hazard of being laughed at, introduced a parcel of black-faced hornless rams among his homed western ewes.

**Natural History of Selborne Volume 2 the by Gilbert White, First Edition**

Such expedients have a great effect on these marauders, and will keep them under. Crista Galli ; and by those who make collections, Cock's Comb. Where hogs are not much in use, and especially by the sea-side, the coarser animal-oils will come very cheap.

**Browse subject: Zoology**

It commences with a list of patients and their affliction. Swans turn white the second year, and breed the third.

**The Natural History of Selborne by White Gilbert, First Edition**

Further particulars of him must be sought in his Diaries, his History of Selborne, and in his Correspondence.

**The Works in Natural History. Comprising The Natural History of Selborne; The Naturalist's Calendar; and Miscellaneous Observations, Extracted from his Papers. to which are added, A Calendar and Observations, by W. Marwick Esq. FLS. de WHITE (Rev. Gilbert): (1802) First Collected Edition.**

On the 3ist I caused! Within the present lioiits of the forest are three con- siderable lakeiu Hogmer, Cranmer, and Wolmer; all of which are stocked with carp, tench, eels, and perch : but the fish' do not thrive well, because the water is hungry, and the bottoms are a naked sand. This item covers locations around Adelaide South Australia.

Thus far it is plain that the deprivation of masculine vigour puts a stop to the growth of those parts or appendages that are looked upon as its insignia.

**§16. Gilbert Whites History and Antiquities of XI. Letter**

From the latter circumstance we may conclude that thaws often originate under ground from warm vapours which arise ; else how should subterraneous animals receive such early intimations of their approach? GRie redstart begins to sing: its note is short and impeifect, but is continued till about the middle of June. If you will then watch the spiders, you will see them shoot out long silvery threads, which will incline to leeward, and presently the spiders will let go their hold of the grass, and launch themselves into the air, floating away on the slightest movement of it. The high part to the south-west consists of a yast hill of chalk, rising three hundred feet aboye the yillage ; and is diyided into a sheep-down, the high wood, and a long hanging wood, called the Hanger.

**The Natural History of Selborne by White Gilbert, First Edition**

At the inner end of this burrow does this bird deposit, in a good decree of safety, her rude nest, consisting of fine erasses ana feathers, usually goose feathers, very inartificialy laid together. The oaks of Temple and Blackmoor stand high in the esti- mation of purveyors, and have furnished much naval timber ; while the trees on the freestone grow large, but are what workmen call shakey, and so brittle as often to fedi to pieces in sawing.
