## ASTM D 2622 : 2003 Standard Test Method for Sulfur in Petroleum P

EFFECT: enhanced reliability of determining. Why: Regulations limiting the concentration of benzene and the total aromatic content of gasoline have been established in order to reduce the ozone reactivity and toxicity of automotive evaporative and exhaust emissions.

## Determination of the carbon and hydrogen contents of gasoline using a combustion method and the estimation of their measurement uncertainty

The error arising from repeatability is usually expressed as a percentage of the full range output.

### Precision Instrument

Effective packaging must be able to absorb the impact and deceleration energy to protect the articles inside. This vapor pressure differs from the true vapor pressure of the sample due to some small vaporization of the sample and air in the confined space.

### Precision Instrument

One should note that the temperature of a body hot point is always measured against a reference temperature cold point , Fig. Information parameters utilized are i aromaticity index of tested product represented by proportion of area of a group of peaks for aromatic compounds on express chromatogram of product and ii density of product at 20°C.

### Standard test methods (ASTM and others) and specifications for petroleum products

IBP - initial boiling point is the temperature the first drop of condensed vapor appears in a distillation test. The values given in parentheses are provided for information only.
