### Marine Structures: Offshore Corrosion Protection 101

It takes huge investments of capital and effort to keep offshore oil and gas fields running. Marine and offshore corrosion describes the principles of effective corrosion control treatments in marine environments with emphasis on economic solutions to corrosion the book explains chemical or electrochemical reaction of an alloy with its environment leading to corrosion and mechanical loss of the metal by erosion abrasion or wear resulting also in corrosion.

### Corrosion, an Issue for the Offshore Wind Industry

He previously worked for Tata Steel, Jamshedpur, in the area of maintenance as a Manager and Specialist in tribology, lubrication, wear prevention, corrosion prevention, maintenance management and condition monitoring.

### Maritime Industry

Under normal corrosive conditions, current flow from the anode results in a loss of metal at the anodic site which results in the protection of the metal at the cathodic site. These need to be regularly stripped down for internal inspection to ensure that, among other issues, the internal connections, cables and flame paths have not corroded. For mechanical equipment working in offshore conditions, advanced coatings are being developed by harnessing nanoparticle technology.

However, the emergence of synchronous laser techniques will facilitate remote thickness measurements of these structures. A method is used for applying the coatings on the surfaces to be protected. REMEDIATION There are few components on an offshore asset that will not at some stage need some form of remediation from corrosion.
