On NSW topographic maps, the weight of a blue line indicates whether it is perennial or not: heavy lines show perennial watercourses, fainter lines show non-perennial. The Hydrologic Investigations Atlases HA Series contains either black-and-white or multicolor maps showing a wide range of water-resources information, such as depth to ground water, floods, irrigated acreage, producing aquifers, water availability, surface-water discharge, chemical or mineral content of water, surface impoundments, and water temperature. Yet, it is clear that any modern theory of landform evolution must take into account the possibility of a periodic regeneration of continental elevations, particularly of large-scale relief features.
