

# Air quality criteria for particulate matter

## Committee on the Challenges of Modern Society] - National Ambient Air Quality Standards (NAAQS) for PM

Description: -

- Women -- Biography.
- Chimpanzees.
- Zoologists.
- Primateologists -- England -- Biography -- Juvenile literature.
- Chimpanzees -- Tanzania -- Gombe Stream National Park -- Juvenile literature.
- Goodall, Jane, 1934-
- Goodall, Jane, 1934- -- Juvenile literature.
- Education, Secondary.
- Education.
- Columbia University. Teachers College. Horace Mann School.
- England -- Ecclesiastical history
- Krasin, L. B. 1870-1926.
- Spain -- History -- Civil War, 1936-1939.
- Irish language -- Dictionaries -- English
- English language -- Dictionaries -- Irish
- South Africa -- Military policy.
- Israel -- Military policy.
- World politics -- 20th century.
- Weapons industry -- Israel.
- Nuclear weapons.
- Intermediate range ballistic missiles.
- Fighter planes -- Israel.
- Jet planes, Military -- Israel.
- Biography & Autobiography / Historical
- Historical - General
- Ancient - Greece
- Biography/Autobiography
- Biography & Autobiography

### Particulate Matter (PM) Air Quality Standards

PM 10 is sometimes referred to as coarse particles.

### Federal :: National Ambient Air Quality Standards for Particulate Matter

Small particles less than 2.

### AIR QUALITY CRITERIA FOR PARTICULATE MATTER (First EXTERNAL REVIEW DRAFT, Oct 1999)

Based on these analyses, EPA staff recognized that the 10th and 25th percentiles of the health event and study population distributions are nearly identical and concluded that the distribution of population data can be a useful surrogate for event data, providing support for consideration of the study population data for Miller et al.

standards, the peak-to-mean ratios that characterize air quality patterns in an area, and whether changes in air quality designed to meet a given suite of standards are likely to be of a more regional or more localized nature. Annual Standard In 1997, the EPA established the form of the annual PM 2.

### Air Quality Criteria for Particulate Matter (Final Report, 2004)

Therefore, the Policy Assessment focuses on changes in annual mean PM 2.

### Applying or Implementing Particulate Matter (PM) Standards

The Policy Assessment concludes it is most appropriate to consider the protection against PM 2. As a result, in conjunction with a generally controlling annual standard, the Policy Assessment concludes it is appropriate to consider setting a 24-hour standard to provide supplemental protection, particularly for areas with high peak-to-mean ratios possibly associated with strong local or seasonal sources, or PM 2.

### Air Quality Criteria for Particulate Matter (Final Report, 2004)

B summarizes the body of scientific evidence supporting the rationale for the proposed decisions, including key health endpoints associated with long- and short-term exposures to ambient fine particles. The air quality criteria are to reflect the latest scientific information useful in indicating the kind and extent of all exposure-related effects on public health and welfare that may be expected from the presence of the pollutant in ambient air.
