REPRÉSENTATION SÉMANTIQUE ET INSERTION LEXICALE on JSTOR

We survey some of the principal properties of this logic and its extensions with, e.

Définition

The resulting category is symmetric monoidal closed, complete and cocomplete. This category is based on a new paradigm to weaken higher categorical structures, and offers several advantages in terms of applications. I will also talk about the liftings of algebraic operations to the codensity-lifted monads.

Generative Semantics

La plupart des spécialistes de la linguistique générative pensent qu'une grammaire devrait générer l'ensemble des expressions sémantiquement bien formées qui sont possibles dans une langue donnée, et qu'une grammaire devrait par conséquent associer une interprétation sémantique à chaque expression.

Generative semantics

A dependent game corresponds to a stable function into this domain; we use its trace to define dependent product and sum constructions as it captures precisely how unfolding moves combine with the dependency to shape the possible interaction in the game. In this talk, I will describe these two approaches, illustrated by the case of labelled transition systems almost no knowledge in category theory is needed for this part. In principle all these different diagrams fit into a common framework: the mathematics of symmetric monoidal categories.
